- 1. Audience Analysis**
- 2. Content Analysis**
- 3. Competitor Analysis**
- 4. Follower Classification**

# Audience Analysis

Given people who aren't in the renewable industry, what industries are they in?  
Are they open to job switching?

# Content Analysis

## What type of content performs best?

On YouTube and LinkedIn

⇒ *Evaluate using post performance metrics: # of views, likes, comments, and/or shares*

## Scraping Process

### 1. YouTube API

*Incorporate YouTube functions  
into own application.*

Retrieved desired information:  
# of views/likes/comments,  
video title, publish date

### 2. Pandas

*Data manipulation.*

Consolidate scraped data into  
a dataframe to perform  
keyword analysis and create  
visualizations

## Keyword Analysis

- Idea: Analyze # of views/likes/comments on videos based on title keywords
  - Do specific keywords make videos perform better, on average and overall (cumulatively)?
- Filter to only consider “meaningful” words (i.e., no prepositions)

## Findings

- Videos on **controversial topics** performed well in average & cumulative # of likes and comments
  - Ex. “Trump” from the title “Renewable Energy Did Well With TRUMP in Office 🇺🇸”
- Videos about “**software**” were well received (high # of likes)
  - Growing sector in energy ⇒ potential topic for further content
- Videos including the keywords “**debate**” and “**illegal**” had among the highest # of comments
  - Ex. “Will Gas Stoves Be Made Illegal?”

## Scraping Process

BeautifulSoup

pandas

**1. Selenium**

*Browser automation tool.*

Automated opening  
LinkedIn, logging in,  
navigating to company  
page, and scrolling  
through all posts

**2. BeautifulSoup**

*HTML parser.*

While Selenium is scrolling,  
extract desired features:  
# of likes/comments/shares,  
media type, post text, and  
post date

**3. Pandas**

*Data manipulation.*

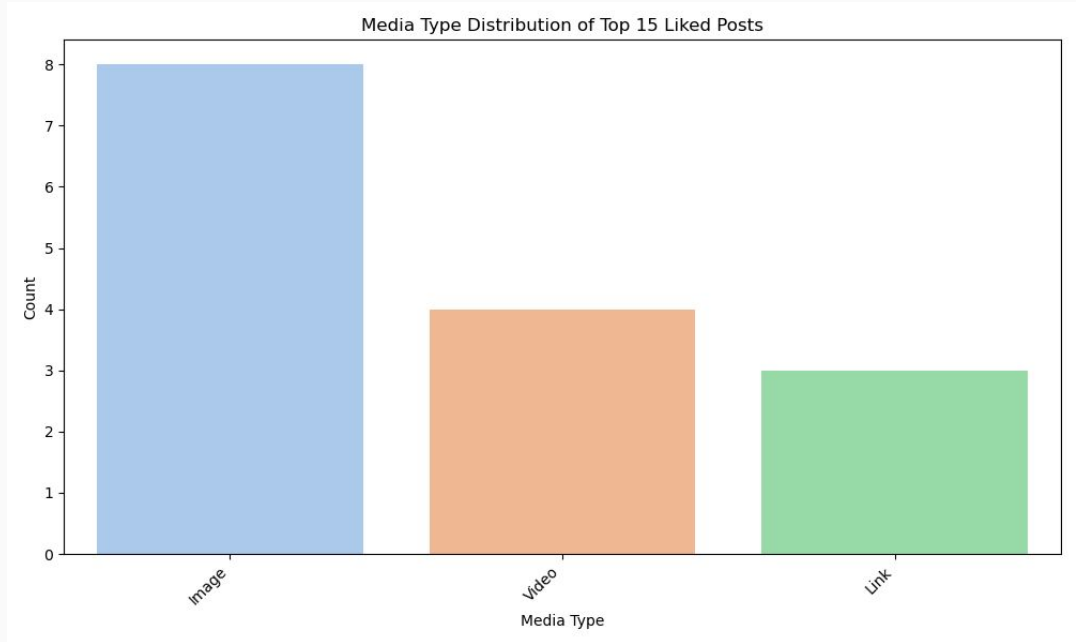

Consolidate scraped data  
into a dataframe to perform  
keyword analysis and create  
visualizations

## Findings

- Posts that highlight other **important figures** and **companies** in the clean energy field performed well in # of likes
  - Ex. Martin Pochtaruk (most liked), Daniel French, Nextracker Inc.
- Posts about **oil** received many likes and comments
- Posts about **agrivoltaics** performed well across the board, receiving the highest average # of comments and shares out of all posts
  - Growing sector in energy ⇒ potential topic for further content

## Media Type Analysis

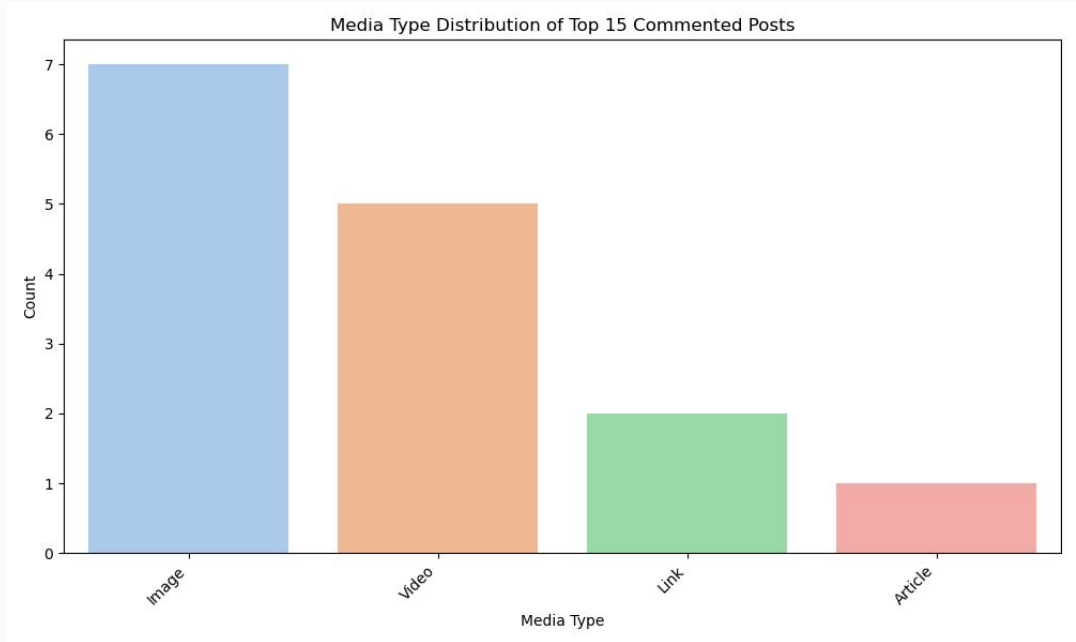

- **Images** performed better in # of likes
- Image/Video/Link/Article Ratio
  - Likes = 8/4/3/0

## Media Type Analysis

- **Images** performed better in # of **comments**
- Image/Video/Link/Article Ratio
  - **Comments = 7/5/2/1**

## Media Type Analysis

- **Videos** performed better in # of shares
- Image/Video/Link/Article Ratio
  - **Shares = 5/8/3/0**

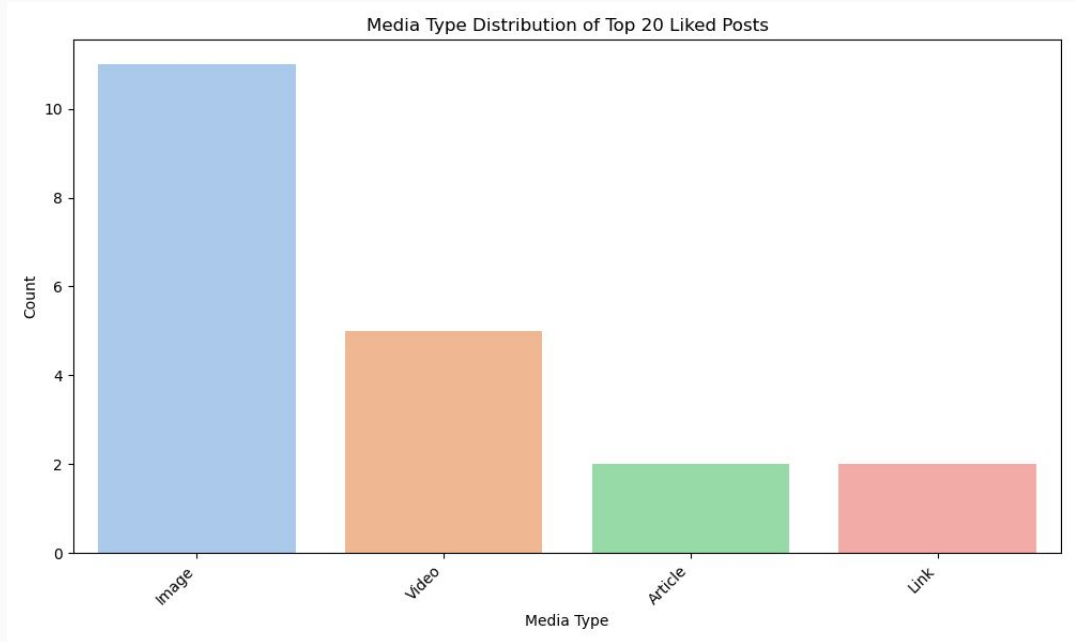

## Findings

- Posts at **energy conferences** performed well in # of likes
  - Ex. RE+, GreenExpo (even though 5 years ago, 2<sup>nd</sup> most liked!)
- What do posts with high # of comments have in common? **Prompting readers**
  - Ex. “What are YOU...?”, “What about you?”, “What trends do you see...?”
- Post about **Houston** received many likes (“clean energy capital of US”)
  - Expand content to global initiatives? Include any breakthrough/unique technologies?
- **Milestones/inspiration** about SunCast well received (100 posts, #becauseofSunCast)

## Media Type Analysis

- **Images** performed better in # of likes
- Image/Video/Link/Article Ratio
  - Likes = 11/5/2/2

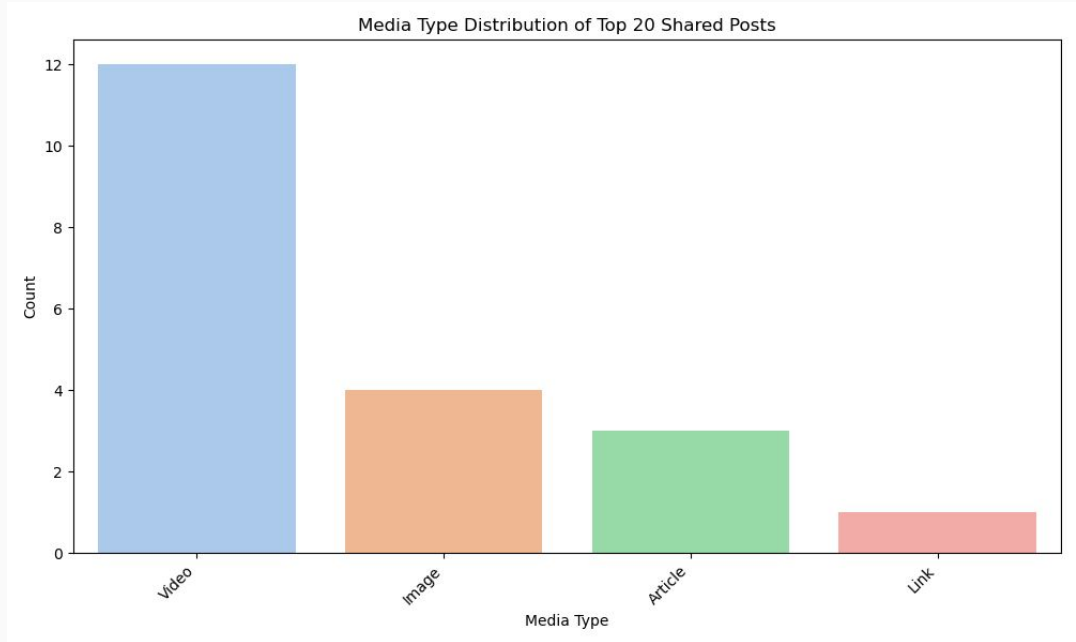

## Media Type Analysis

- **Images** performed better in # of **comments**
- Image/Video/Link/Article Ratio
  - **Comments = 9/5/3/3**

## Media Type Analysis

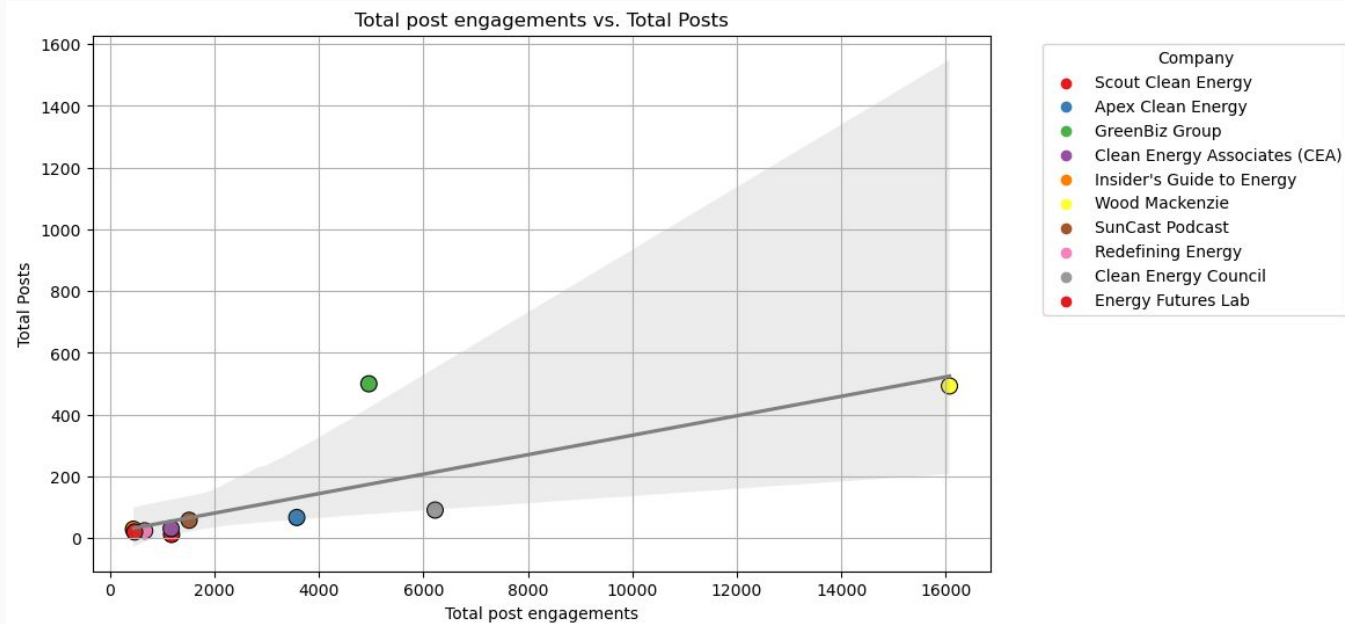

- **Videos** performed better in # of shares
- Image/Video/Link/Article Ratio
  - **Shares = 12/4/3/1**

# Competitor Analysis

## Total post engagements vs. Total Posts

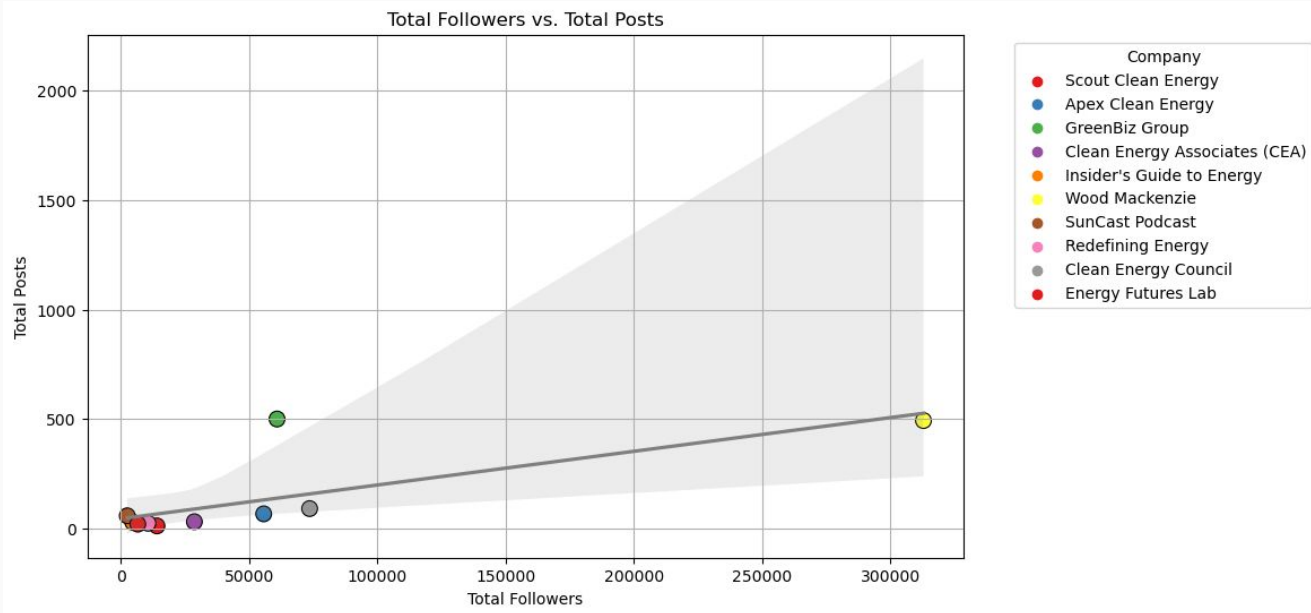

- There is a positive correlation between the number of post engagements (Reactions + Comments + Shares) / Impression) and total posts of a podcast company (90 days).
- Correlation coefficient: **0.785**

## Total Followers vs. Total Posts

- There is a positive correlation between the number of posts and total followers of a podcast company (90 days).
- Correlation coefficient: **0.745**

# Follower Classification

## Fine-tune GPT 3.5

True negative rate: 0.939

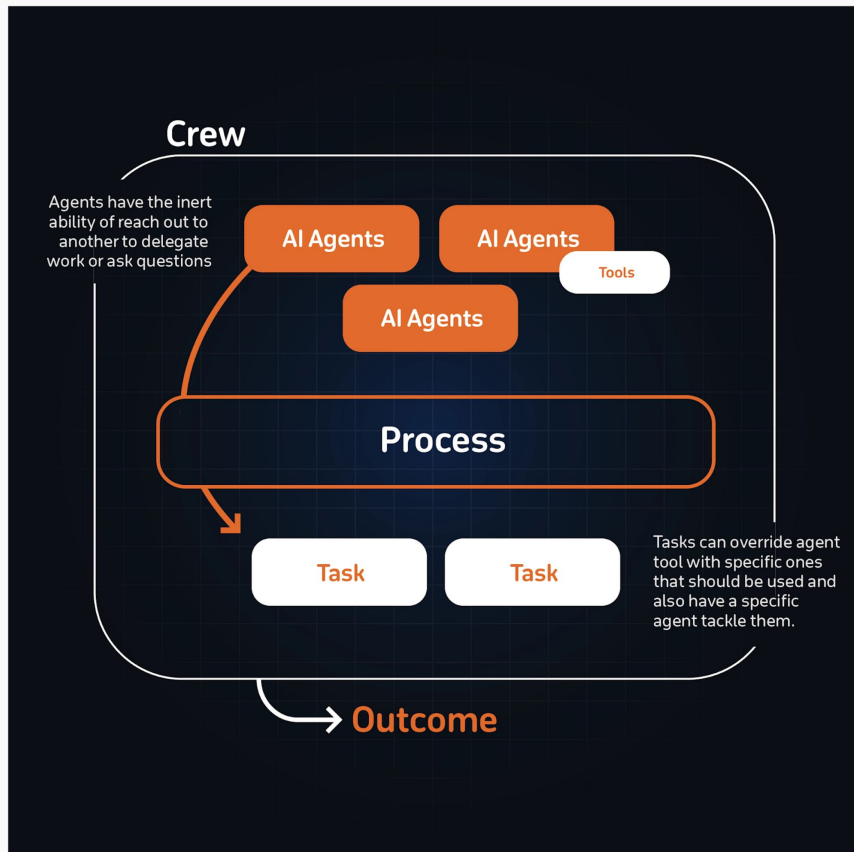

## Challenges:

## Finetune:

- Input not directly classifiable

- Diverse website structure
- Token limit
- High cost
